Checkpoint 5 16-06-2025   ☺

added admin and subscription management for him

He had to add role-based functionality to his previous task.
Finished API keys and created presentation.

added the admin and subcription management for the api keys. is a nice team mate and good product owner. enjoyed working with him in this project

---

Checkpoint 4 check point 4 03-06-2025   ☺

have done my part (API keys + reseller Auth)

Andrii's task for previous sprint was working not as intended so he had to work on it again from the scratch. Eventually it went good.

API keys. Finished in time. Moved task to next sprint because there was additional requirement we came up with because it is needed for application to work properly.
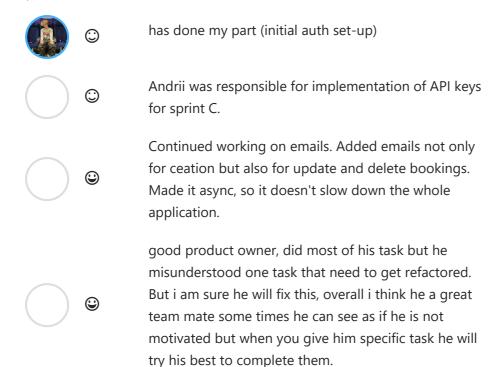

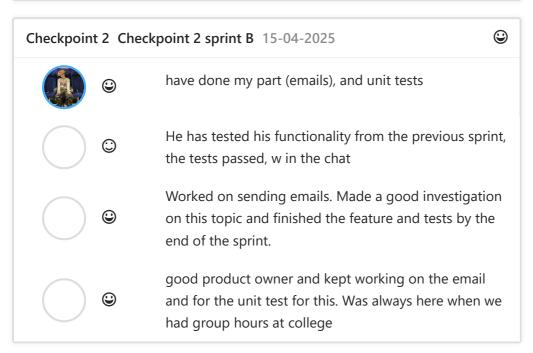

did authentication and api keys. got some feedback for the client and will implement those ones also keep it up!

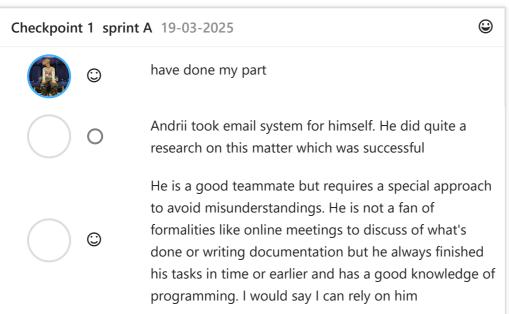

Checkpoint 3 sprint c 14-05-2025   ☺

has done my part (initial auth set-up)

Andrii was responsible for implementation of API keys for sprint C.

Continued working on emails. Added emails not only for ceation but also for update and delete bookings. Made it async, so it doesn't slow down the whole application.

good product owner, did most of his task but he misunderstood one task that need to get refactored. But i am sure he will fix this, overall i think he a great team mate some times he can see as if he is not motivated but when you give him specific task he will try his best to complete them.

Checkpoint 2 Checkpoint 2 sprint B 15-04-2025

have done my part (emails), and unit tests

He has tested his functionality from the previous sprint, the tests passed, w in the chat

Worked on sending emails. Made a good investigation on this topic and finished the feature and tests by the end of the sprint.

good product owner and kept working on the email and for the unit test for this. Was always here when we had group hours at college

Checkpoint 1 sprint A 19-03-2025

have done my part

Andrii took email system for himself. He did quite a research on this matter which was successful

He is a good teammate but requires a special approach to avoid misunderstandings. He is not a fan of formalities like online meetings to discuss of what's done or writing documentation but he always finished his tasks in time or earlier and has a good knowledge of programming. I would say I can rely on him

☺ good work ethic in this sprint and a good product owner , helps other members in the team when needed
